

1. Problem with link in Email

I had this before and it was fixed with adding the path [https://www.\\*\\*\\*\\*\\*.de/PM/....](https://www.*****.de/PM/....)  
But now the „s“ is missing at end of https and the item cannot be loaded again.

2. Also the rest of the path is missing!!!

3. I have not received Emails in the past days because the system has been overloaded and shut down automatically. When daily mails exceed the number of 750 then provider shuts down the sending of mails.

- I have not changed anything on those items which I get mails over and over again!
- They message says that the Downdown list „Priority“ has changed the value. However, it did not!!!
- I had to stop the CRON for mails.
